Code Blame 8 lines (6 loc) · 424 Bytes

```
1 # Create a variable for the first name and use input() to get text from the user's keyboard
2 first_name = input("Please enter your first name: ")
3
4 # Create a variable for the last name and use input() to store the second piece of user data
5 last_name = input("Please enter your last name: ")
6
7 # Use the print function to output both variables to the console with an automatic space between them
8 print(first_name, last_name)
```
